

July 2025 CSE 216
Online on Advanced SQL
Subsection: B1+B2

Time: 50 minutes + 5 minutes(submission)

1. List managers whose departments have average salaries higher than the overall company average, for departments located in Toronto and Oxford.
2. Find employees who both work in departments with more than 5 employees AND have salaries greater than the overall average salary across all employees.
3. Write a SQL query for employees in departments that have managers, with no job history records, and salary > dept average. Show full_name, salary, dept_name, and label 'Stable High Earner' if salary > 1.7 times dept average, else 'Dept Above Avg'.
4. Find employees who are either in departments with more than 5 employees or have a job with minimum salary above 10000.
Display: employee_id, first_name, last_name, department_id, job_id, salary.
5. Write an SQL query to find employees who satisfy exactly one of the following conditions:
(i) they work in a department with more than 5 employees, or
(ii) their job has a minimum salary greater than 10000.

Employees who satisfy both conditions or neither condition must be excluded. Display employee ID, full name, department ID, job ID, and salary.
